Software Engineer Junior - Java / C#

About me

Middle Developer and Team Lead with 3+ years of experience in a company creating market-leading 1C products in their respective fields. Since early 2024, I have been actively studying Java and related technologies to expand my skill set and transition to a new career path. I have completed 5 courses and implemented a pet project in Java. Seeking an internship or junior position to apply my accumulated experience and skills to new projects!

Work experience

1C-developer, teamlead · Helix · Tiraspol
July 2021 - Present · 4 years 5 months

- Supported and improved the company's software: 1C: Fitness Club, 1C: Beauty Salon, 1C: Stomatology.

The programs were developed on the 1C:Enterprise platform and are used by clients in their respective business fields. The development team consisted of 13 1C developers and 4 testers (2 Manual QA, 2 Auto QA).

- Resolved over 500 critical bugs and implemented custom software modifications based on client requests.

- Optimized database queries and code, increasing the performance of certain system modules by 2-3 times.

- Developed and implemented features to optimize client scheduling and improve staff workload efficiency: waiting lists, appointment logs, client booking, workload visualization, and more.

Integrated with 8+ popular services: YandexPay, Paygine, YooMoney, Yandex.Business, 1C: Business Network, Comagic/UIS, Yandex.Metrics, ThroneBaron, and BioSmart ACS.

- Enhanced functionality for marketing campaigns, payroll calculations, medical records, financial modules and more.

- Leadership (since 2024): Trained 2 interns from Trainee to Junior levels and conducted code reviews.

Technologies: 1C programming language, 1C query language, HTML, CSS, JavaScript, RESTful API, Postman.

Java Developer · Diploma Project · Tiraspol
June 2024 - August 2024 · 3 months

- Independently developed the logic and implemented the project "Telegram Bot @RealBirthdayNotifierBot" using Java and Spring. The bot allows users to store, view by month, and set reminders for friends' birthdays at specified times. Additionally, it can import friends' birthdays from VKontakte. The project is hosted on GitHub, deployed on a Linux server, and runs in a Docker container.
- Technologies: Java, Spring Boot, Lombok, Maven, PostgreSQL, SQL, Hibernate, Redis, Docker, Git, Linux.
