- Fast learner
- Technical thinking
- Ambition and desire for growth
- Communication and teamwork skills
- Flexibility and openness to change
- Knowledge in the IT field
- Punctuality
- Responsibility
- Attention to detail

Developer

About me

I studied programming for 4 years in Tiraspol and participated in various IT projects, where I worked on backend tasks and provided technical support. One of the most interesting projects I was involved in was developing a cloud storage system using blockchain technology. I've also worked on other projects, which I'd be happy to discuss in more detail during an interview.

I completed Java courses for beginners, but due to limited opportunities to apply Java in practice locally, I focused more on other technologies. Still, I'm ready to return to it and pick it up quickly. I also studied C# with ASP.NET MVC, and explored frontend basics using JavaScript and HTML/CSS. I'm familiar with foundational C# frameworks like Entity Framework and basic use of LINQ.

I'm a fast learner and adapt quickly to new software, tools, and workflows. I work confidently with computers, office software, and technical systems — I'm sure I can bring value to any team. By nature, I'm responsible, goal-oriented, and ambitious — I don't like standing still and always aim to be someone people can rely on.

Desired industry

- IT, Tech

Education: Specialized secondary

Courses, trainings

Java developer
Graduated in 2023

C# developer

Driving licence

Category: A, B, C
With personal auto
