IT Cybersecurity specialist

Despre mine

Linux (Advanced Beginner Level)

I know how to install and configure distributions such as Ubuntu, Kali, and Debian.

I work confidently in the terminal: navigating the file system, managing access permissions (using the chmod command).

I have experience with network configuration using commands like ip, netplan, ping, and traceroute.

Vulnerability Scanning

I have tested basic tools such as Nmap and Nikto in testing environments.

Antivirus Solutions

I have used basic antivirus programs (e.g., Windows Defender, ClamAV) and understand how virus protection works.

Virtualization

I know how to create and run virtual machines in VirtualBox for safe testing of systems and applications.

Basic Networking Knowledge

I understand what IP addresses, DNS, and basic protocols (TCP/IP) are, and I can configure a simple firewall (e.g., UFW).

Logs and Monitoring

I can open and read basic logs using commands like journalctl or cat on Linux systems.

Simple Bash Scripting

I can write very simple scripts to automate tasks such as backups or updates.

Social Engineering

I am aware of the risks of phishing attacks and have learned how to recognize them.

Preferințe
